

**71st Annual Meeting
of the Midwestern Legislative Conference
of
The Council of State Governments**

July 17 – 20, 2016

**Resolution Supporting the Deployment of Advanced, Innovative
Electric Transmission Technology**

- WHEREAS,** a secure, reliable and resilient power grid integrating generation resources serves as a foundation of a growing economy and is critical to our national security; and
- WHEREAS,** regulators, policy-makers, and consumers expect generating resources and the grid to perform extremely reliably; and
- WHEREAS,** a significant portion of the nation's transmission facilities are aged and will require a replacement strategy; and
- WHEREAS,** environmental regulations, state renewable energy portfolio standards, state and federal tax policies, other economic factors and technology developments are causing some electric generation resources to retire, while replacement generation, some of it fueled by intermittent resources, is being sited at other locations on the electric grid; and
- WHEREAS,** new innovative cost-effective transmission technologies (including, but not limited to, high-capacity/high-efficiency conductors, and compact transmission towers) are commercially available that can increase grid capacity, improve energy transfers, promote greater stability and resiliency, make more efficient use of rights-of-way, reduce transmission line losses and help to streamline siting and construction activities; and
- WHEREAS,** the policy of the National Association of Regulatory Utility Commissioners recognizes the benefits of these technologies to modernize the grid and improve generating resource integration and encourages electric utilities, grid operators and state public service commissions to consider the cost-effective use of these technologies; now therefore be it
- RESOLVED,** that the Midwestern Legislative Conference encourages state legislatures and public service commissions to support utility efforts to: 1) investigate and consider new advanced transmission technologies when replacing aged transmission infrastructure; 2) evaluate new transmission technologies to determine whether they

Adopted this 20th day of July, 2016 at the 71st MLC Annual Meeting in Milwaukee, Wisconsin

can cost effectively ensure the continued reliable delivery of electricity while providing greater capacity and enhanced efficiency; 3) consider the ability of these technologies to reduce environmental and visual impacts to communities; and 4) consider the ability of these and other technologies to reduce the overall cost of energy delivery; and be it further

RESOLVED, that the MLC encourages state legislatures and public service commissions to work with Regional Transmission Organizations/Independent System Operators and other planning authorities to support and encourage consideration of those cost-effective advanced electric transmission infrastructure options that can increase grid capacity, reduce transmission line losses, improve energy transfers, make efficient use of rights-of-way, improve energy efficiency, and help to streamline siting and construction activities in their planning, evaluation and oversight of transmission grid development, especially by utilizing existing transmission corridors; and be it further

RESOLVED, that the MLC encourages state legislatures and public service commissions to include in their oversight of transmission facilities the consideration and promotion of the appropriate use of advanced electric transmission technologies in support of their interest in the continued provision of affordable, reliable electricity to consumers; and be it further

RESOLVED, that this resolution be submitted to appropriate state, federal and provincial officials.

Adopted this 20th day of July, 2016 at the 71st MLC Annual Meeting in Milwaukee, Wisconsin
